

FLEET

# EV Charging Stations for Fleets

PROVIDE A RELIABLE POWER SOURCE • SHOWCASE SUSTAINABILITY INITIATIVES

As you plan to electrify your fleet, there are several factors to consider to ensure the proper electric vehicle charging infrastructure is ready to support now and for the future. Blink offers unique options to optimize our services to meet your fleet's needs specifically.

## Considerations for Fleet Deployments

- **Where do you plan to park and charge your fleet vehicles?**  
Whether you plan to have your fleet vehicles charge at a specific location, at home, or while on route to their destinations, it is necessary to have the charging infrastructure ready and reliable.
- **What type of vehicles will you have in your fleet?**  
There are numerous options available to ensure your fleet vehicles are always charged and ready, such as the charging station levels and load management systems.
- **Do you plan to grow your fleet in the future?**  
Preparing your property's electrical ability to support additional electric vehicle charging stations is crucial when installing.
- **What driving conditions will your vehicles be operating under?**  
Factors in regard to extreme weather conditions, hot or cold, can often reduce driving range. For this reason, you may want to consider on-route charging.
- **Who will be operating your fleet vehicles?**  
Depending upon the nature of your business, you may need to educate your employees on how to operate their EV fleet vehicle and charging stations. Many charging station providers offer to manage users and track their performance with charging stations.

## PLAN FOR FUTURE DEMAND

The Edison Foundation estimates that by 2030 there will be over 18.7 million electric vehicles on the roadways requiring additional EV charging infrastructure.

Be prepared for the future by installing Blink IQ 200 charging stations today and differentiate yourself from other fleets.

When you're ready, a Blink representative can help you accurately assess the need for your fleet.
